ENERGY CONTRACTING CATALOGUE

Energy & Contracting

Efficient solutions, sustainable energy...

Şalt Elektromarket, a group company responsible for the sales and contracting operations of Şalt Otomasyon, has been operating in Konya since 1988. We combine our deep expertise in the energy sector with electrical material sales and turnkey project contracting services to deliver innovative, reliable, and sustainable solutions to our clients.

Our company stands out in the sector by serving as an authorized distributor of nearly 20 leading brands

in electrical and electronic equipment, offering a wide range of high-quality products.

In addition to product sales, we differentiate ourselves in electrical contracting by prioritizing quality, safety, and sustainability in every project we undertake.

As part of the Şalt Group, we aim to extend our experience and forward-thinking vision to a broader audience through Şalt Elektromarket, continuing our commitment to shaping the future of energy with determination and innovation.

Safe, efficient, and sustainable energy solutions!

As Şalt Elektromarket, we combine our technical expertise with innovative solutions in energy contracting projects to deliver reliable and sustainable energy infrastructures to our clients. From low voltage (LV) and medium voltage (MV) systems to power factor correction and energy monitoring solutions, we provide a wide range of engineering services, implementing each project with detailed analysis and meticulous calculations.

To ensure maximum efficiency in energy management, we utilize modern technologies while prioritizing quality, safety, and sustainability at every stage of our projects. We carry out meticulous planning by considering critical factors such as fire safety, environmental impacts, and occupational health to ensure uninterrupted and secure operation of facilities, and we shape our implementation processes accordingly.

With our contracting services in the industrial, energy, and construction sectors, we deliver reliable and sustainable projects. By leveraging advanced engineering and innovative technologies, we provide customized solutions for pharmaceutical, defense, iron & steel, food, cement, automotive, plastics, and chemical industries. We also develop efficient energy infrastructures for biogas, wind, and solar power plants, as well as water and wastewater treatment facilities.

Strong Infrastructure, Uninterrupted Solutions

In addition, we provide comprehensive engineering and implementation support for airport, residential, commercial, educational, and healthcare building projects, developing reliable and high-performance systems tailored to the needs of each sector.

Industry and Manufacturing

In the industrial and manufacturing sectors, we offer tailored solutions for pharmaceutical, defense, iron & steel, food, cement, automotive, plastic, and chemical industries.

By delivering reliable, efficient, and innovative services across various production processes, we aim to make a meaningful difference.

Energy and Environment

We offer sustainable and innovative solutions for biogas plants, wind and solar power plants, and water treatment facilities.

Our goal is to contribute to the future by promoting the efficient use of renewable energy sources and implementing environmentally friendly practices.

Infrastructure and Construction

We provide comprehensive solutions for airports, residential and commercial buildings, educational institutions, and hospital projects.

Our goal is to build safe, modern, and sustainable structures that add value to living spaces.

Installation of Grounding and Surge Protection Systems To ensure electrical safety, grounding and lightning protection systems are implemented.

omized tions in ing Projects

Fire Detection and Suppression Systems

Fire detection and automatic suppression systems are installed and tested to ensure fire safety.

Floor and Wall Cabling Systems

For cabling, floor and wall trays are installed to ensure the system is securely and neatly arranged.

Testing and Commissioning

Tests are conducted to ensure all systems are operational, and the system is commissioned.

Training and User Support

Training is provided to factory personnel for the correct use of the system, and necessary technical support is offered.
